

## The "Rotation - Preventer"

The existing secondary datum

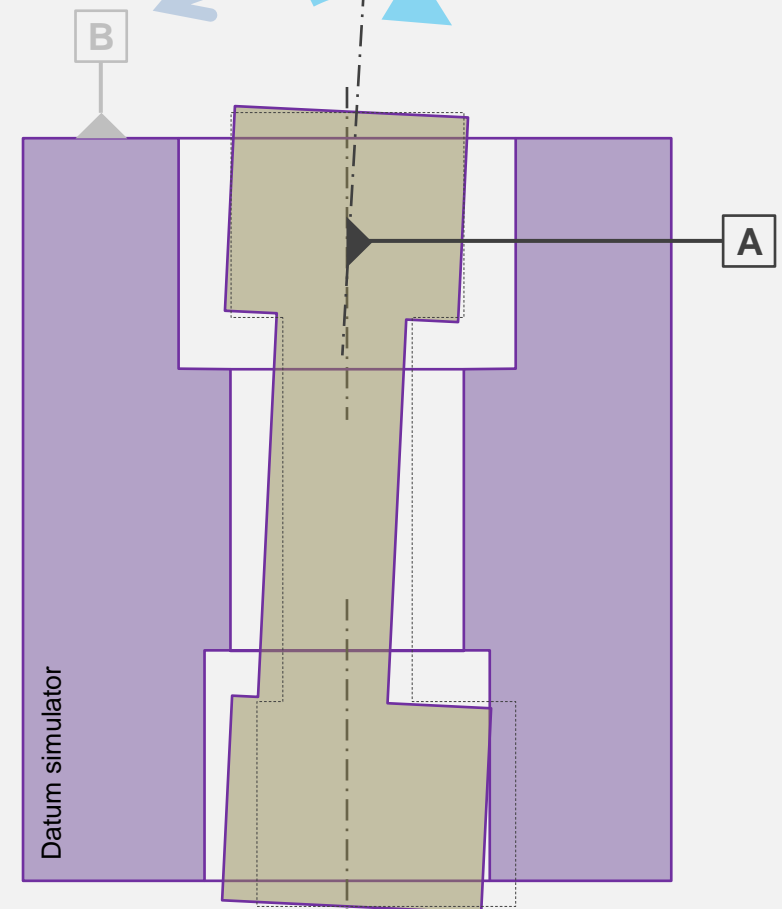

In the sense of **"Technical Logic"**

Translation relative to the datum simulator admitted.  
 Rotation would lead to an **ambiguous situation** because of datum B. Designer's decision to change the datums.

## The "Rotation - Allower"

The missing secondary datum

Rotation relative to the datum simulator admitted.  
 Translation relative to the datum simulator admitted.  
**No chance to create an ambiguous situation** because of "missing datum B".
