

Is this cross section perpendicular to UAME?
No, it isn't

Is this UAME?
Yes, it is.

So, is there something wrong with this?
Yes, it is

Derived Median Line

A *derived median line* is an imperfect line formed by the center points of all cross sections of a feature of size. These cross sections are perpendicular to the axis of the unrelated actual mating envelope of the feature of size. An example of a *derived median line* is shown in Figure 10-2.
